Cyanotypes and Vandyke printing are simple, experimental and two of the oldest photographic methods available.

Learn these antique photographic processes using paint-on emulsions in royal blue and earthy brown.

Smooth surface papers and cloth (cotton, muslin or silk) are coated, dried and exposed in the sun or UV light and then developed in water.

You can continue with this process at home without expensive equipment, and it can be combined with drawing, painting and collage.

Bring large negatives (digital or photocopies on acetate are fine) pressed botanicals or other flat objects (feathers, lace, transparent materials, x-rays or old negatives).

Additionally, the instructor Anna Tomczak will bring larger negatives which can be printed on computer generated transparency film or black and white photocopies on transparency film.
